

SKIDDED SYSTEMS

Feldmeier Equipment supplies complete skidded systems for the pasteurization and sterilization of food products. Depending upon the customer's specific requirements, we engineer the heat exchanger equipment, necessary controls and instrumentation for the system. Automation incorporated in a system can range from simple thermostatic and pneumatic controls to completely automatic PLC-based systems with touch screens for operator interface. Our in-house capability to handle setup and teardown of our systems along with our ability to create platforms that make the skidded system a whole unit sets us apart from the competition.

Feldmeier Equipment offers:

- Custom design
- Experienced engineers and draftsmen
- Personalized quality service
- Concurrent fabrications capabilities
- Modular design
- Full in-house assembly and disassembly
- Installation, reassemble supervision, start-up and field work
- OSHA structures
