

## RAPIDMIXER WITH REMOVABLE SERVICE CARRIAGE

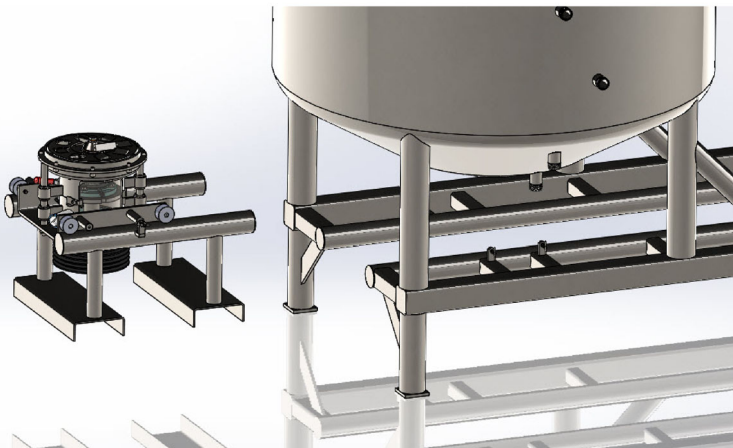

1) The Feldmeier Rapidmixer with removable service cartridge consists of a bearing/seal/impeller cartridge bolted to the mixer bottom. It is sealed by means of a sanitary O-ring.

2) When service is required, the seal/bearing cartridge is lowered onto a carriage with rollers that rest on the mixer frame.

3) The carriage is then disengaged from the frame and can be rolled onto the mixer frame.

4) The seal/bearing cartridge and carriage can then be secured to a pallet jack trolley and then removed to a service area where all the mixer internals can be serviced.
